SKILLS

Programming Languages:	Java, C/C++, Python
Frameworks / Libraries:	Spring Boot, Spring, Hibernate, JPA, gRPC
Backend / Architecture:	Microservices, Distributed Systems, Concurrency, RESTful APIs, Kafka
Software Design / Fundamentals:	Data Structures & Algorithms, OOP, System Design, Low-Level Design
Observability:	Grafana, New Relic, Prometheus, Kibana
Databases / Caching / Cloud:	MySQL, PostgreSQL, Redis, AWS, GCP
DevOps / Tools:	Maven, Jenkins, Git, JUnit, Mockito, Kubernetes, Docker, Airflow, GitHub Copilot, CI/CD, Agile

EXPERIENCE

Myntra Software Engineer	<i>Bengaluru, India</i> Dec '24 - Present
------------------------------------	--

- Reduced **Last-Mile Consolidation** usage by **44%** by building a **zone-based order-grouping** flow on an **event-driven Kafka architecture** that lets one picker collect co-located multi-item orders in one pass, removing a manual consolidation step.
- Built core components of the **MNow × Flipkart** stock-transfer (**STN/RSTN**) pipeline that handles up to **20K items per consignment**, including **distributed item reservation** with **compensating rollback** and **Kafka-driven listeners** for the pick, pack and dispatch flow.
- Designed and built **lot-level inventory APIs** for **multi-lot** support in the **ATP service** so stock is tracked and reserved per lot (price and expiry batches), removing a class of orders that failed late in the fulfillment pipeline. Rolled out behind **feature gates** with **zero downtime**.
- Resolved a **Redis hot-key** bottleneck where a wildcard-pincode rule-set cache had grown to **~4MB**, sharding it with a **deterministic hash** and **async** parallel fetches to remove the memory pressure and slow cache warm-ups.
- Traced **CPU spikes** in a Tier-1 **gRPC** service to an unbounded **CachedThreadPool** and replaced it with a **bounded ThreadPoolExecutor** with queue and rejection metrics to stabilize **p99** latency.

Zee5 Associate Software Development Engineer	<i>Bengaluru, India</i> Jan '22 - Sep '23
--	--

- Developed and optimized **Spring Boot microservices** for Zee5's subscription and plan-management flows, cutting response time by **20%** across a platform serving **2M+ subscribers**.
- Migrated **legacy outsourced systems** to in-house microservices and built the supporting **RESTful APIs**, cutting data-retrieval latency by **~30%**.
- Designed and built the **"Churn Arrest" feature** that offers targeted discounts to at-risk subscribers, lifting recurring subscription retention by **15%**.

PROJECTS & PUBLICATIONS

BitTorrent Client <i>Python, asyncio</i>	Project
--	----------------

- Built a BitTorrent client in Python using asyncio for concurrent peer communication, optimizing file transfers through parallel piece downloads.
- Implemented .torrent file metadata parsing and tracker communication to manage multiple peer connections efficiently.

Gesture Detection using Accelerometer and Gyroscope <i>Springer</i>	Publication <i>Paper link</i>
---	---

- Developed a gesture-based Human-Machine Interface using CNNs for classifying IMU sensor data.
- Trained and evaluated multi-layer CNN models to achieve 90-96% gesture recognition accuracy.
- Deployed models on low-power embedded hardware, enabling real-time inference and edge AI capability.

EDUCATION

PES University Bachelor of Technology Department of Computer Science and Engineering	<i>2018 - 2022</i> Bengaluru
---	---------------------------------
